

“Drone FM” – Technical Documentation of Areas

Product description

We offer technical documentation of important sites within any area: manufacturing plants, logistic parks, sports areas, accommodation compounds, parks, golf courses, municipal areas, etc. This product can very efficiently and to a large degree replace conventional geodesic services focused on technical documentation of areas. It saves about 50% of the time and up to 20% of the money spent on conventional geodesic services.

Who it is intended for

Owners, investors, developers and administrators of selected areas, plants or compounds.

Anyone planning modifications or development of an area or property.

Anyone who wants to have a perfect overview of their property as well as its kind and area and to handle it efficiently.

What the client gets

- A tool for effective management of their area (the extent of maintenance of individual sites)
- A detailed overview of the areas of the individual important sites down to the centimetre.
- Interactive ortophoto of the area in the form of a multi-layer PDF file (the individual layers represent important sites)
- The possibility to connect the output with the cadastral map
- The possibility to include the output in the client's GIS system
- A source for planning project design work within an area or its vicinity
- A comprehensive high-resolution (cm/pix) view of the area with the possibility of carrying out their own measurement of lengths and areas
- Faster and more efficient data collection; output completed within days
- Outputs can be verified by an authorised surveyor.
