

## ICT

### Product description

The product provides complete ICT management of administrative buildings, communication with external data services providers and structured wiring in a metallic or optical version. The product also includes the creation of network documentation, overviews and updates of active features, and creation and administration of camera, security and entry systems.

### Who it is intended for

For anyone who owns or manages a property and doesn't have sufficient capacities in terms of personnel for maintaining and developing an ICT network.

For anyone who cares about the satisfaction of tenants in their building, where an ICT data network is an essential part of every working day.

For anyone who cares about managing sensitive information and who wants to oversee the movement of external companies within the property.

### What the client gets

- ONE CONTACT FOR ALL ICT REQUIREMENTS
- Professional ICT services
- Creation and management of a Wi-Fi zone within the property
- Proactive approach to ICT
- Regular inspection of active features
- The most effective ways of data network protection
- Control over the movement of external data services providers within the property
- Reduced prices of active features
- The possibility of using telecommunication consultancy
- The possibility of creating data networks within the property
